ADD = 16, SUB = 17, MUL = 18, DIV = 19.

$n1 \times n2$.

upper 32 bits of result
lower 32 bits of result

$n1 / n2$.

div n2

constant / reg.

Machine Language - PROGRAM - 2.

GOAL: RESERVE storage for 5 integers.

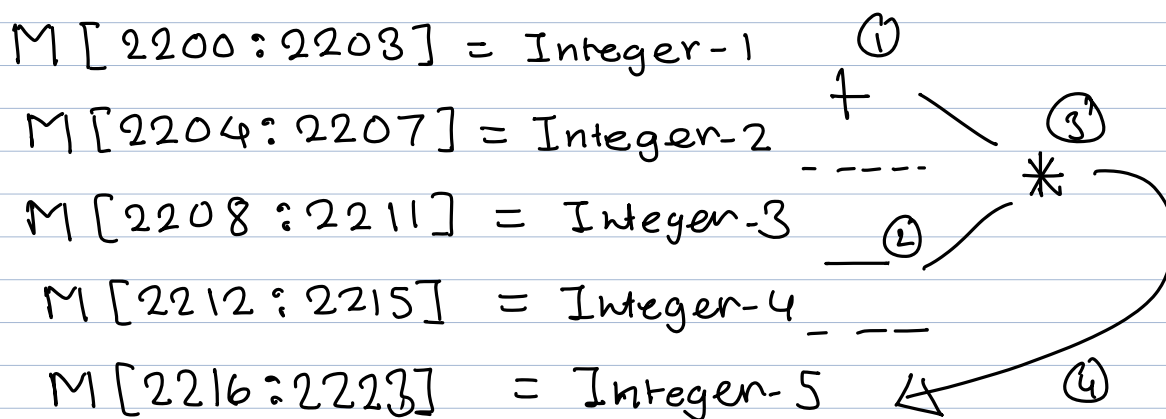

- The fifth integer will store the final result for the computation.
- You must take addition of first two integers.
- You must subtract integer 4 from integer 3
- You must take product/multiplication of the result of addition & subtraction.

$$\boxed{\text{Int 5}} = \left(\boxed{\text{Int 1}} + \boxed{\text{Int 2}} \right) * \left(\boxed{\text{Int 3}} - \boxed{\text{Int 4}} \right)$$

Solution:

Stage-I:

Reserve storage for 5 integers.

Step-1: $R_0 \leftarrow M[2200:2203]$

Step-2: $R_1 \leftarrow M[2204:2207]$

Step-3: $R_0 \leftarrow R_0 + R_1$ [R_0 contains the sum of first two integers]

Step-4: $R_2 \leftarrow M[2208:2211]$

Step-5: $R_3 \leftarrow M[2212:2215]$

Step - 6 : $R_2 \leftarrow R_2 - R_3$

[R_2 contains the subtraction of 4th int from 3rd].

Step - 7 : $[R_1 : R_0] \leftarrow R_0 * R_2$.

Step - 8 $M[2216 : 2219] \leftarrow R_0$

Step - 9 $M[2220 : 2223] \leftarrow R_1$

STEP-II : Decimal Machine language

2200:							
2204:							
2208:							
2212:							
2216:							
2224:	8	4	2	2	2	0	0
	1	0					
2233:	8	4	2	2	2	0	4
	1	1					
2242:	16	4	1	1	1	0	
2248:	8	4	2	2	2	0	8
	1	2					
2257:	8	4	2	2	2	1	2
	1	3					
2266:	17	4	1	3	1	2	
2272:	18	4	1	2			
2276:	8	4	1	0			
	2	2	2	1	6		
2285:	8	4	1	1			
	2	2	2	2	0		
2294:							

Program = $M[2200 : 2293]$

Data Section: $M[2200 : 2223]$

Text section: $M[2224 : 2293]$

Whichever number that you or end-user wants to be integer 1 can be/must be stored in $M[2200:2205]$

Computer logic:

- 1) Develop logic of doing something without knowing the exact value of data but properties of data!
-

Assembly lang.

rd?

rd ← $\xrightarrow{\quad}$
mull rd

rd:rd

just before add

rd = 100 rd = 200

just after add

$r_0 = 100$ $r_1 = 200$

add r_1, r_1

just before add: $r_1 = 2500$

just after add: $r_1 = 1000$
